

An Orthopedic Specialist Put Barry Alvarez Back In The Game

"I was in pain 24 hours a day. I couldn't walk around the block. My quality of life was zero.

Thanks to my orthopedic surgeon and my knee replacement implants, the pain is gone, and I can live my life again."

—Barry Alvarez, Director of Athletics and former head football coach, University of Wisconsin

Each year, nearly 1 million patients like Barry Alvarez are treated with total joint replacement surgery by highly skilled orthopedic surgeons. Each patient treated saves the U.S. healthcare system about \$70,000 over the life of the patient.¹ That's a win for our citizens and for our economy.

When skilled surgeons and modern implant technology come together, miracles happen.
